Grant summary:

The “STEM for Safety” project, led by the Mapping the Future with STEM initiative, aims to improve public safety through citizen engagement, especially youth, and the use of innovative STEM-based solutions.

The project mobilizes 50 volunteers, who over a seven-month period will conduct “safety walks” in three neighborhoods to identify hotspots and unlit areas, mapping them using GPS tools and developing a digital safety map accessible to the public and local institutions. In parallel, through practical workshops, young people will build “Do It Yourself” (DIY) solar lanterns and reflective safety markers from recycled materials, which will be temporarily placed in high-risk areas as immediate measures to increase safety and encourage sustainable interventions by municipal institutions.
